Research interests

Numerical analysis, linear algebra, tensor methods, high-dimensional problems, machine learning, deep learning, quantum chemistry, stochastic partial differential equations, wavelets, data mining

Education/Scientific degrees

- 2012 Doctor of Sciences in Numerical Mathematics, Institute of Numerical Mathematics of Russian Academy of Sciences, Russia.
- 2007 Ph.D. in Numerical Mathematics, Institute of Numerical Mathematics of Russian Academy of Sciences, Russia, Supervisor Prof. Eugene Tyrtyshnikov.
- 2000-2006 B.Sc, M.Sc. in Applied Mathematics and Physics, Moscow Institute of Physics and Technology, Russia, Supervisor Prof. Eugene Tyrtyshnikov.
With honors.
- 1996-2000 Lyceum “Second School”, Moscow, Russia.

Doctor of sciences thesis

- title Numerical tensor methods and their applications
- description I developed a new efficient and stable representation for the high-dimensional tensors — Tensor Train (TT) format, which has no inherent curse of dimensionality. I proposed fast and efficient algorithms to perform basic linear algebra operations with tensors in the TT-format (including approximation of a full tensor, addition of tensors, matrix-by-vector product) in a stable way using QR and SVD factorization and in linear complexity in the dimension of the tensor. I also proposed an interpolation formula for low-rank tensors that allows to recover the full tensor only from a small amount of its entries. I demonstrate how the TT-format can be applied to the solution of the high-dimensional problems in quantum chemistry, to the solution of stochastic partial differential equations and to multidimensional data compression.

PhD thesis

- title Nonlinear approximation of matrices
- supervisor Prof. Eugene Tyrtyshnikov
- description I constructed efficient algorithms for several problems of non-linear approximation of matrices, based on the low-rank approximation techniques. The problems include approximation by a sum of a circulant plus low rank matrix (with application to preconditioning of Toeplitz systems), approximation by a sparse plus low rank matrix (with application to missing data estimation) and approximation of the inverse matrix by a sum of Kronecker product using a Newton-type algorithm with truncations.

Academic positions

- 2016-present Head, Skolkovo Institute of Science and Technology, Moscow, Soil Informatics Laboratory.
- 2015-2016 Interim Director, Skoltech CREI for Computational Data-Intensive Science and Engineering, Moscow.
- 2013-present Associate Professor, Skolkovo Institute of Science and Technology, Moscow, Head of Scientific Computing Group.
- 2003-present part-time researcher (2003-2006), junior researcher (2006-2007), researcher (2007-2008), senior researcher (2008-2014), leading researcher (2014-present), Institute of Numerical Mathematics of Russian Academy of Sciences, Moscow, the group "Matrix methods in mathematics and applications" (group leader Prof. Eugene Tyrtyshnikov).

Visiting positions

- 2011, 2016, 2017 Invited professor in the Trimester programs, Bonn, Hausdorf Institute for Mathematics.
- 2009-2012 Invited researcher in Max-Planck Institute for Mathematics in den Naturwissenschaften, Leipzig, group of W. Hackbusch.

Selected honors and awards

- 2012 Winner of Dynasty Foundation contest among young mathematicians.
- 2009 Medal for the best scientific work among young scientists in Mathematics in 2009 (joint with D.V. Savostyanov), Russian Academy of Sciences, Moscow, Russia.
Every year, RAS awards prizes to young scientists for best research, usually no more than two in each of 19 areas of sciences.
- 2005 Medal for the best student scientific work in Mathematics in 2005, Russian Academy of Sciences, Moscow, Russia.
Every year RAS awards prizes to students of Russian institutes and universities, usually no more than two in each of 19 areas of sciences.

Grants and projects

I have served as PI for the following grants and projects:

- 2017-2019 Russian Foundation for basic research, "Solution of linear systems with block low-rank matrices".
- 2017-2019 Russian Science Foundation grant, "Tensor methods and machine learning for optimization of complex multiparametric problems".
- 2016- Contract with Rusagro, "Factors determining soil fertility".
- 2016-2017 Contract with Schlumberger, "Construction of reduced order models for oil reservoir simulations".
- 2015-2016 Ministry of Science and Education, contract "QTT-technology for multiscale problems".

- 2016-2018 Russian Foundation for Basic Research, grant 16-31-060095, “Methods for the solution of differential and integral equations on very fine meshes with special structure.
- 2014-2015 Contract with Huawei, Multiuser MIMO systems, Best project leader award.
- 2014-2015 Contract with Intel, Development of machine learning and time series algorithms.
- 2014-2016 Russian Science Foundation grant, “Theory and algorithms for the approximation of multidimensional arrays.
- 2013-2014 Yandex company, grant “Matrix and tensor methods for optimization and data mining”.
- 2012-2013 Ministry of Science and Education, grant 8235 “Web-based educational computing system”.
- 2012-2014 Russian Foundation for Basic Research, grant 12-01-00546-a “Tensor methods for complex configurations of particles”.
- 2011-2013 Russian Government contract II1065 “Development of efficient software for photonic electronic spectrometer”.
- 2010-2012 Russian Government contract II1112 “Methods for the solution of differential equations with highly varying coefficients”.
- 2011-2012 Russian President Grant for the young PhD scientists MK-140.2011.1 “Numerical tensor methods and their applications”.
- 2009-2011 Russian Government contract II1178 “Tensor methods for compression of signals, images and videos”.
- 2009-2011 Russian Fund for Basic Research, grant 09-01-00565-a “Matrix methods for many-body problems”.
- 2009-2010 Russian President Grant for the young PhD scientists MK-127.2009.1 “Approximation of multidimensional arrays and numerical solution of problems in high dimensions”.

Courses taught

- 2014-present Numerical Linear Algebra, Skoltech.
- 2014-present Fast methods for partial differential and integral equations, Skoltech.
- 2010-2013 Matrix methods for data compression and analysis, Moscow Institute of Physics and Technology.
- 2009-present Modern computational technologies, Moscow State University.

Research advising

Doctoral advising

Alexander Mikhalev, Moscow State University. Graduated: 2014.

Currently supervising more than 10 PhD students at Skoltech, INM RAS, MIPT and CMC MSU.

Professional service

Editorial boards

Associate Editor, Advances in Computational Mathematics, 2016-

Reviewer for the following journals

Applied Numerical Mathematics
Digital Signal Processing
IEEE Transactions on Very Large Scale Integration Systems
IET Information Security
Journal of Computational and Applied Mathematics
Journal of Computational Mathematics and Mathematical Physics
Linear Algebra and its Applications
Linear and Multilinear Algebra
Mathematics of Computation
Mathematical Notes
Numerische Mathematik
Numerical Linear Algebra and its Applications
Russian Journal of Numerical Analysis and Mathematical Modelling
Sbornik: Mathematics
SIAM Journal on Scientific Computing
SIAM Journal on Matrix Analysis
SIAM Journal on Numerical Analysis
SIAM Journal on Optimization
SIAM Journal on Uncertainty Quantification
Theoretical Computer Science
Journal of Computational Physics
NIPS, ICML, ICCV, ECCV conferences

Service

- 2009-2012 Member of the Council of young scientists of Russian Academy of Sciences
- 2012-2015 Member of the expert committee on the projects by young scientists, Russian Foundation for Basic research

Software development

- 2009-present TT-Toolbox, <http://github.com/oseledets/TT-Toolbox>.
Efficient algorithms for tensors in the TT-format, including basic linear algebra and advanced solvers, MATLAB, see <http://www.ohloh.net/p/TT-Toolbox>
- 2008-2009 Fast multiplication of polynomials over GF(2).
Generator of optimal algorithms of multiplication of polynomials over GF(2)
- 2009-present h2tools, <http://bitbucket.org/muxas/h2tools>.
Efficient open-source code for the solution of integral equations/N-body problems using hierarchical matrices and nested cross approximation

Selected invited and plenary talks

- January 2016 Tensor train(s) for quantum chemistry., Exploiting New Advances in Mathematics to Improve Calculations in Quantum Molecular Dynamics, Banff Research Station.
- March 2016 Astronomically large structured linear systems: what are the challenges?, Structured Matrix Computations with Applications, TSIMF.
- April 2016 Tensor trains and tensor networks., Workshop Tensor computing and the Internet of Things, Leibniz Centrum for Informatik.
- March 2015 Low-rank approximation of matrices and tensor with application to dynamical and optimization problems, SIAM CSE, Salt Lake City, USA.
- January 2015 Tensor methods for numerical solution of PDEs, New Discretization Methods for the Numerical Approximation of PDEs, Oberwolfach, Germany.
- June 2014 Numerical tensor methods: algorithms and tools, ECMTB, Groningen, Sweden.
- March 2014 Numerical tensor methods: tools and applications, SIAM Conf. Imag. Sciences, Hong Kong.
- January 2014 Multidimensional numerical algorithms and their applications, Conference on numerical analysis and scientific computing, Leipzig, Germany.
- July 2013 Numerical tensor methods in higher dimensions, Workshop on Novel Numerical methods, Munich, Germany.
- June 2013 Numerical tensor methods: multiparametric and non-stationary problems, MODRED 2013, Luminy, France.
- June 2013 Numerical tensor methods and their applications, ILAS 2013, Providence, USA.
- September 2012 Computational tensor methods and their applications, SLMA 2012, KU Leuven.
- January 2012 Problems that tensor methods can not solve yet (invited talk), 28 GAMM Seminar, MPI MIS, Leipzig.
- August 2011 Multiparametric model reduction using TT-format. (invited talk), ILAS 2012, TU Braunschweig.
- August 2011 TT-approach to the solution of high-dimensional problems (invited talk), HDA 2011, Uni. Bonn.
- April 2011 Computational tensor methods in physics, chemistry and mathematics (plenary talk), 24, Saratov, Russia.
- March 2011 Advanced operations in TT-format and QTT-formats. (invited talk, Comput. meth. in multidimensional applications, MPI MIS, Leipzig.
- January 2011 QTT-approach to the solution of high-dimensional problems (invited talk), 27 GAMM Seminar, MPI MIS, Leipzig.
- June 2010 Algorithms and applications of TT-decompositions (plenary talk), Novosibirsk, Russia.
- May 2010 Applications and development of TT and QTT format (invited talk), Tensor meth. in multidim. boundary value and spectral problems, MPI MIS, Leipzig.
- September 2010 Computational tensor methods and their applications, Theory and numerical methods for the inverse problems, Novosibirsk, Russia.
- September 2010 Tensor trains, TT and QTT formats (plenary talk), Separation of variables and applications, Nice.
- June 2010 Algorithms and applications of TT and QTT decompositions, ILAS-2010, Pisa.

- February 2010 TT-decomposition of tensors with application to high-dimensional problems and data compression (invited talk), 26 GAMM Seminar, MPI MIS, Leipzig.
- October 2009 Compact matrix form of the d-dimensional tensor decomposition (invited talk), NOLTA, Sapporo.
- February 2009 Breaking the curse of dimensionality, or how to use SVD in many dimensions (invited talk), GAMM, Gdansk.
- December 2008 Some new results and algorithms for tensor-structured matrices in 3D problems (invited talk) , SCPDE, Hong Kong.
- September 2008 Parallel solution of linear systems over finite fields and optimal multiplication of matrix polynomials (invited talk) , Cortona-2008.
- September 2008 Some new results and algorithms for tensor-structured matrices in 3D problems (invited talk), Conference on numerical matrix analysis and operator theory (invited talk), Helsinki.
- July 2007 Fast multiplication of matrix polynomials and some tricks for the computation of trilinear decomposition in $GF(2)$ (invited talk), ICCMOE, INM RAS, Moscow.
